

Graph-Ex SA² with Rhizolock[™] TECHNOLOGY

Inoculant Seed Lubricant
for Soybeans

NOW WITH TWO STRAINS OF TRICHODERMA.

Contains a specially formulated blend of encapsulated rhizobia bacteria soybean inoculant plus an additional biological formulated in a talc-graphite carrier.

- Better seed flowability
- Easy on equipment
- Increase plant stand
- Improve seedling vigor
- Accelerate canopy closure
- Improve nutrient and water efficiency

Graph-Ex SA²

Inoculant *Seed Lubricant*
for **Soybeans**

**WHEN IT COMES TO
MAXIMUM YIELD
ADVANTAGE *PLUS* PLANTER
PROTECTION, GRAPH-EX SA²
IS THE CLEAR CHOICE.**

MAXIMUM YIELD ADVANTAGE

Graph-Ex SA² for Soybeans contains a unique triple stack rhizobia for soybeans. It is effective over a wide range of soils and climate conditions, including hot dry soils and cool moist soils. The special blend of talc and graphite improves seed loading and seed release. In the meter, Graph-Ex SA² for Soybeans ensures that seeds release consistently to improve seed spacing.

Rhizolock Technology

Rhizolock Technology is Agrauxine's rhizobia encapsulation process. It provides better seed coverage and there is less dust-off. Most importantly, there is improved survivability of the rhizobia in adverse conditions providing better nodulation to achieve maximum yields.
