

# SabrEx<sup>2</sup><sup>®</sup>

## ROOT INOCULANT

for **SOYBEANS & LEGUMES**

**SabrEx<sup>2</sup> for Soybeans & Legumes** is a biological seed treatment that is easy to use and delivers increased profitability to growers. It enhances nutrient efficiency that supports root and plant growth. SabrEx<sup>2</sup> for Soybeans & Legumes is compatible with many common seed treatments and can be very beneficial to soybeans inoculated with Bradyrhizobia.

### Available in three formulations:

- PB is a low volume, talc/graphite based planter box treatment.
- In-Furrow is a liquid applied at planting.
- LQ is a liquid applied to the seed by a commercial seed treater.

### SabrEx<sup>2</sup> for Soybeans & Legumes will:

- Create more robust root systems
- Increase water and nutrient efficiency
- Increase yields
- Induce resistance to plant stresses like dry weather
