

MEGAPACK™

LOW VOLUME INOCULANT
for Soybeans

Mega PROFITS

MegaPack™ is a low volume liquid formulation that drastically reduces seed bridging and sticking, especially when applied with seed fungicides or insecticides. It contains three times the Rhizobia, and goes on at about a third of the application rate, as standard liquid formulations.

- **Lowest application rate** available to keep treated seed flowing
- Only 0.6 fl. oz per 140k lbs soybean seed
- Compatible with common seed treatments
- **Triple stack** Rhizobia strain package for top yield responses
- Can be used with Plus 30 Extender for longer planting windows. And, the Extender includes a Flowability Polymer for better handling and increased plantability
- MegaPack™ is conveniently packaged in **2.5 gallon jugs**

Keep the seed treater running. Keep the planter moving.
Ask your seed dealer or ag chem distributor about
MegaPack™ Low Volume Inoculant.
